CONFERENCE ENVIRONMENT POLICY

ASHM Conference and Events
Division implements a waste-
reduction policy that addresses:

- Reduce, Reuse, Recycle. This is done before, during and after each conference.
- ASHM Conference & Events Division reduces the number of printed materials by using electronic communication means wherever possible, including the website, email, online registration and abstract submission.
- ASHM Conference & Events Division monitors final delegate numbers for an accurate forecast of catering requirements in order to avoid waste.
- ASHM Conference & Events Division aims to research and prioritise purchasing items and equipment that support the use of recycled materials or can be recycled after use.
- ASHM Conference & Events Division will aim to ensure that recycling bins are available onsite at all events.
- ASHM Conference & Events Division will endeavor to minimise travel through the use of teleconferences instead of face-to-face meetings and holding meetings only when necessary.

ASHM Conference & Events Division encourages all conference stakeholders to consider the environment by suggesting the following: reduction in printing requirements; recycling conference materials; and reusing conference merchandise.

Assessment and Management of Liver Fibrosis and Cirrhosis

Dr Jones & Partners is able to provide **Liver Elastography scans** (a non-invasive, ultrasound scan). This scan can help accurately assess patients with minimal fibrosis or with severe fibrosis/cirrhosis.

Several new medications have been made available on the PBS for the treatment of patients with Hepatitis C. These medications enable GPs to effectively treat and manage affected patients to minimise liver damage.

Elastography of the liver can be referred for both the initial assessment of disease (baseline) and monitoring of response to treatment (progression/response).

An Elastography Ultrasound scan is Medicare rebated. It can be referred by both GPs and Specialists.

Elastography is used for the initial assessment and ongoing management of patients with:

- Hepatitis B
- Hepatitis C
- Chronic liver disease
- Liver fibrosis
- History of heavy alcohol use/abuse
- Potential cirrhosis from non-alcoholic fatty liver disease.

The referring clinician should request “Liver Elasto” - one of the clinical indications above should be detailed on the referral form.

Patient Preparation - Standard preparation for an Upper Abdominal Ultrasound. Patients are required to fast for 6 hours prior to the exam.

Metavir Fibrosis Stages

Dr Jones & Partners is able to provide Elastography Ultrasound scans at many of our clinics located Centrally, North, South and Hills.

For bookings contact the nearest Dr Jones & Partners Medical Imaging Clinic.

For further information on Liver Elastography scans please contact the Radiologist at your nearest Dr Jones & Partners clinic or visit our website www.drjones.com.au

Established for over 10 years, the Australasian Hepatology Association (AHA) is the peak professional body supporting and educating hepatology nurses and allied health professionals across Australia and New Zealand. Our membership consists of well-informed forward-thinking and experienced Hepatology professionals who encompass many specialist areas in a variety of settings. These include Hepatitis B and C treatment and care, chronic liver disease and chronic disease management, liver transplantation, liver cancer, health policy, sexual health, mental health, drug and alcohol, infectious diseases, indigenous health, culturally and linguistically diverse (CALD) health services, prison health services and nutrition.

Booth number: 7

Hepatitis Australia is the national peak community organisation to progress action on issues of importance to people affected by hepatitis B and hepatitis C. Our members are the eight state and territory hepatitis organisations. Our mission is to lead an effective national community response to hepatitis B and hepatitis C in Australia and realise our vision to see an end to hepatitis B and C in Australia. We work to improve health and social outcomes for all Australians who are at risk of or living with hepatitis B or C and pay particular attention to those groups which are at higher risk of infection or have a disproportionate burden of chronic disease.
